

CONNECTOR PACKAGE WITH ANTI-ADSORPTION MEMBERS

Abstract

A plurality of connector packages (10) is stacked together for receiving connectors (20) with caps (30) attached thereon. Each package includes a base (100) defining a plurality of receiving zones (102). A number of the receiving zones each defines a sole-plate (106) having a slick upper plane (108) toward the connector and a lower plane (110) toward a package stacked below the former package. Each lower surface defines a plurality of bulges (112) thereon. By means of the bulges defined on the lower plane, the lower plane is coarse and the connectors received in the nether package will not adsorb the lower plane.
